

Calpendo: The Intelligent Core Facility Management System
13:15 – Workshop Area 2 – Tuesday 30th June 2015

Many core facilities invest in expensive shared equipment and resources, but are then frustrated by an inadequate core facility management system. Some make do with the limitations of generic free online calendars, while others spend months building their own system, only to find that it cannot keep up with the changing requirements.

The kind of scheduler required in a research or mixed clinical/research environment is complicated, with different core facilities all having their own unique specifications and requirements. A solution that will fully satisfy the requirements of all core facilities can only be achieved with a high level of configuration flexibility. This is what Calpendo provides.

Calpendo is consistently recognised as the best-in-class scheduler with its powerful, intelligent and configurable controls. By managing users, bookings, resources and projects and allowing a core facility to specify all the rules they could want, Calpendo provides a bespoke solution for every core facility, while being as easy to use as a Google calendar for regular users. Calpendo also provides excellent reporting capabilities for budgeting, invoicing, resource usage and project management purposes.

Calpendo has been providing significant benefits for core facility directors, managers and regular users since 2009, with satisfied customers based throughout Europe, North America, Africa and Asia.

Please come along to our workshop to see how Calpendo can be configured to support your core facility's bespoke needs, both now and as they change in the future.

Calpendo is produced by Exprodo Software, who can be found at booth #904.
